

dlp transportation ltd

DLP Transportation Ltd is expert in its field and has an in depth knowledge of how the planning system operates. It has forged excellent working relationships with local planning and highway authorities throughout the UK. This means its staff can assist you to get your transport and highways issues resolved faster and make your development aspirations become a reality sooner.

Transport Assessments

DLP Transportation Ltd undertake investigation of the transport implications of all types of development including residential, retail, office, industrial and leisure proposals. The assessments include the estimation of the number of trips generated and their distribution onto the surrounding road network, site access design and the provision of facilities for sustainable modes of travel such as public transport, cycles and walking.

Travel Plans

A Travel Plan is a package of measures aimed at reducing reliance on the car and promoting more sustainable modes of travel. DLP Transportation can tailor your Travel Plan to reflect your organisation's needs and site characteristics.

Public Transport

DLP Transportation Ltd has expertise in the identification and design of facilities to aid public transport in association with development and within existing urban and rural areas. These involve considerations of bus priority, park-and-ride, the location and layout of stations, and their operational characteristics.

Traffic Management and Control

DLP Transportation Ltd are experienced in the assessment and design of traffic management and control measures in both urban and rural areas. This includes traffic calming, priority measures, traffic signals, parking restrictions and road signs and markings. The relationship between the level of provision for each mode of transport is critical in achieving a balanced and integrated transport network.

Highway Design

DLP Transportation Ltd can carry out preliminary design of road infrastructure including the design of new junctions and links, and the re-evaluation of existing junctions, in order to address specific operational or safety concerns. The assessment of a junction may also form part of a wider corridor or area of study involving increased provision for public transport, cyclists and pedestrians. The impact of additional traffic upon the capacity of a junction, particularly in relation to a new development, is analysed using computer prediction models.

Road Safety

Accident reduction studies and safety audits of schemes covering vehicular, cycle and foot traffic are an essential component of transportation engineering. Solutions to the safety problems are identified and designed to complement the surrounding road environment.

Expert Witness

DLP Transportation Ltd regularly provides evidence for planning appeals and appears at hearings, public inquires and civil proceedings.

Parking and Servicing

Assessment of the level and type of on and off-street parking is an essential component of any development proposal. This includes consideration of the design of the parking or servicing facilities, and the appropriate methods to regulate or control the use of these facilities. This work may be undertaken independently or as part of a wider traffic management or impact study.

Pedestrians and Cyclists

The transportation team has in-depth working knowledge of the provision of facilities for those wishing to walk or cycle, which both complements other modes of travel and offers an alternative to the private car. Our work spans the identification of alternative routes through to their design. The design of these facilities is often undertaken as part of a wider study in order to achieve a balanced level of provision for all modes of transport.

DLP Transportation Ltd is one of the DLP Consulting Group of companies and offers wide ranging and soundly based expertise across all aspects of transportation planning issues.

Our greatest asset is our staff who possess a wealth of collective experience from consultancy, local authority and developer backgrounds. Excellent transport planning and highway engineering ability is enhanced by a good understanding of the wider planning system and an appreciation of commercial issues faced by developers and clients.

We have a network of contacts with respected practices able to offer a wide range of related disciplines dedicated to the needs of development and the environment.

We have participation in local communities through membership of local organisations, for example, Chamber of Commerce.

Broad based yet tailored to its Clients' individual needs, DLP offers a comprehensive range of planning and transportation services

Transportation within the planning system is now facing radical review with far greater emphasis on sustainable forms of transport and wholesale changes to high rate design standards.

DLP Transportation is the natural choice to handle projects from the simplest of schemes to those of the most complex, demanding, and controversial nature, and which require the highest level of expertise, dedication and innovation.

Our objective is to offer a practical solution to problems in a highly personal and effective way, to meet the aspirations of our clients. Our aim is to match the required advice to the problem, the goal being the right solution.
